

Is your Vehicle ready for summer driving?

Ask about our **AC Tune Up Special!**

Climate conditions in Wisconsin are **extremely** hard on your vehicles climate control system:

Lubrication Depletion

-Your vehicles Climate Control System runs year round, from cooling your cabin on hot days to melting ice and snow from your windshield in the winter months. Over time the oil in your system will begin to lose its protection against friction and heat.

Cabin Air Quality

-Condensation in your vehicle's air conditioning system promotes fungus, mold and bacterial growth that is blown into the passenger compartment. The humidity in Wisconsin helps to increase the growth of these organisms.

Our Climate Control Service Will: Only:

- Produce quieter operation
- Reduce wear
- Save money in costly repairs
- Protect against rust & corrosion
- Increase compressor life
- Use special EPA and USDA accepted product to kill mold and fungi and freshen AC
